

The CleanMAX-N range is an industrial ultrasonic cleaning machine, designed to be used in industrial applications where the heavy duty performance is needed. This models are widely used for parts washing in automotive, aviation, metalware and other industries where parts precise cleaning is essential before surface treatment or final assembly. Filtration system, oil separator, circulation pump and weir system are available as an option.

General Features

- Tank capacities from 60 Lt to 240 Lt
- Frequency 28 khz
- Stainless Steel Construction (EN 1.4301/ AISI 304)
- Stainless Steel Tank EN 1.4301/ AISI 304(316L or T according to customer requirement)
- Automatic shutting off the heating element and ultrasonic transducers for low water level protection.
- Thermostat controll for heating elements
- Adjustment of cleaning time.
- XX02 and XX12 models have power adjustment
